### ABSTRACT

Bipolar Disorder is a complex condition that affects millions of people worldwide. Its diagnosis, treatment, and management require a multidisciplinary approach, which includes pharmacological interventions, psychotherapy, and patient and family education.

**Keywords:** Bipolar Disorder, Latin American Literature, Multidisciplinary approach.

### 1 INTRODUCTION

Bipolar Disorder is a complex condition that affects millions of people worldwide. Its diagnosis, treatment, and management require a multidisciplinary approach, which includes pharmacological interventions, psychotherapy, and patient and family education. The purpose of this study was to analyze the clinical and therapeutic aspects of bipolar disorder. To this end, a systematic review of the consul

literature was carried out, using the Latin American and Caribbean Literature in the Sciences of Latin America and Caribbean Literature in Latin American Sciences.

Saúde (Lilacs), the Medical Literature Analysis and Retrieval System Online (Medline) and the Scientific Electronic Library Online (SciELO), adopting inclusion and exclusion criteria. After analyzing the data, as a conclusion, this study emphasizes that bipolar disorder is a complex condition, emphasizing the effectiveness of Acceptance and Commitment Therapy (ACT) in certain stages of the disease, the importance of flexibility in treatment, the need for a multidisciplinary approach, and the relevance of early diagnosis, family support, and understanding of cognitive dysfunctions. In short, it highlights the importance of personalization of treatment, social support, and the exploration of new therapeutic perspectives in the management of bipolar disorder.
